**AFFIDAVIT OF MARGARET D. RUBINO
ON BEHALF OF
THE NEW YORK PUBLIC SERVICE COMMISSION**

Margaret D. Rubino being duly sworn, states as follows:

1. My name is Margaret D. Rubino. My business address is 3 Empire State Plaza, Albany, New York 12223. I am currently a Telecommunications Policy Analyst IV in the Office of Communications of the New York Public Service Commission (NYPSC). I have been a member of the NYPSC's section 271 evaluation team since late 1996. My primary responsibilities on the 271 team have been reviewing and analyzing Bell Atlantic-New York's (BA-NY's) performance, and resolving disputes between the parties regarding, interconnection, collocation, and unbundled network elements. I have a Bachelor's Degree in mechanical engineering from Tufts University.

2. My career at the Public Service Commission over the last nine years has included tariff review and rate design, assisting in interconnection arbitrations and mediations, and general

engineering analysis. Since March, I have facilitated an industry collaborative group which developed the hot cut provisioning process used by BA-NY, and continues to work to resolve ongoing issues that arise in connection with hot cut activity.

3. Through the course of the NYPSC Proceeding, Case No. 97-C-0271, I have conducted numerous data reconciliations and other analyses with regard to hot cut loop timeliness and accuracy. The purpose of my affidavit is to describe how I performed these reconciliations, and what my conclusions are. I have conducted these reconciliations by going through the following steps: I asked each company to identify all purchase order numbers for orders completed in a given month, and how the companies scored each order under the Commission's approved carrier-to-carrier metrics. I narrowed the universe of orders to those in dispute, and asked each company to provide all underlying documentation to support their scoring of the orders. I compared the documentation to identify the series of events that led up to each hot cut, and to determine whether the hot cut was successful and timely. The results of my analyses follow.

Hot Cut Timeliness

4. I examined in detail orders submitted by AT&T during the period of June 21, 1999 through August 31, 1999, in three separate reconciliation exercises. The information I reviewed included Work Force Administration (WFA) logs (diaries that BA-NY's hot cut technicians use to record their activities), hot cut checklists (the data recording form used by BA-NY and AT&T), local service requests, local service request confirmations, and trouble ticket information from BA-NY. I also examined comparable documentation from AT&T for each order.

5. The first reconciliation encompassed orders submitted by AT&T between June 21 and July 16, 1999. Of the 132 AT&T orders initially contested by AT&T, the parties were able to

agree on the scoring of 50 orders. I concluded that BA-NY should have scored 20 additional orders as missed appointments under the PR4-06 On Time Performance – Hot Cut metric. For the remaining 62 orders, I scored 6 as on-time, 5 as either cancelled or excluded (because the customers' retail service had been terminated for non-payment), and 51 orders as postponed for various reasons, and therefore not completed during the study period. This information was provided to the parties by the Administrative Law Judge on August 13, 1999 (Case 97-C-0271, Letter/Ruling Accepting Staff Analysis and Closing the Technical Conference Process (issued August 16, 1999)). As I noted in my report to the Administrative Law Judge, my assessment of these orders was limited to the specific events and times specified by AT&T as in dispute.

6. The second reconciliation involved additional data filed by AT&T with the NYPSC concerning timeliness for all hot cuts in the month of July 1999. AT&T charged that only 72% of hot cuts performed by BA-NY during the month of July 1999 were timely. After a cursory review by Staff identified a number of AT&T errors, AT&T filed a revised affidavit citing a 76% on time rate.

7. For this second data reconciliation, I reviewed a sample of BA-NY's hot cut checklists against its reported performance using the methodology described above. I found that with very few exceptions the checklists supported the data that BA-NY reported in the PR 4-06 metric.

8. I compared AT&T's log information against BA-NY's for the same orders, and found a number of discrepancies. For a number of orders, the descriptions of the events did not match. For others, the discrepancy in the reported metric scoring was explained by a difference in the way each company interpreted the definition of metric PR 4-06. Because in some cases the carrier-to-carrier definition was not entirely clear, on October 12, 1999, Staff counsel sent a letter to counsel for BA-NY and AT&T clarifying the definitions Staff would use to score the orders in

the reconciliation. (AT&T Meek Aff., Attachment 6). For the purpose of these reconciliations, I did not attempt to determine which party's facilities were responsible for troubles reported after the hot cut provisioning window. I scored as "I-codes" (installation troubles within 7 days of provisioning) all orders for which troubles were reported by AT&T after the provisioning and testing window. Under the carrier-to-carrier guidelines, BA-NY is only required to report as I-codes troubles in its network. Therefore, if AT&T reported a trouble that turned out to be a trouble with its own network or with its customer's premise equipment, these troubles would appear as I-codes in my scoring but would be properly excluded from BA-NY's metric reporting.

9. Where the parties' information conflicted, I made an assessment of which information was likely to be more accurate. I relied on the mechanized time stamps in each company's logs to determine the timing of events, and compared the names of technicians in the logs to determine whether the companies were recording different events, or were recording the same events at different times. I scored each of the orders in question according to the PR 4-06 metric, as clarified by Staff counsel's October 12 letter. I identified 29 orders that BA-NY should have scored as misses but did not, and 18 orders that were scored as misses in the first reconciliation but also included in this second reconciliation. Adjusting BA-NY's reported on-time performance for the industry as a whole of 94.34% to reflect these additional misses, the performance number is 90.79% . For AT&T, BA-NY's on-time performance was 88.34%. The results of this analysis are detailed on the NYDPS Staff Reconciliation BA-NY Hot Cut Timeliness for July (NYDPS Exhibit 3).

10. I performed the same analysis for AT&T's August hot cuts. AT&T reported that BA-NY's on-time performance was 80.93%, while BA-NY reported 93.93% on-time for AT&T Orders. I determined that BA-NY's data should have reflected an additional 22 missed appointments. Adjusting for these additional misses, BA-NY's on-time performance for AT&T

was 90.55%, and for the industry as a whole the performance was 91.54%. The details of this analysis are presented on Staff Reconciliation BA-NY Hot Cut Timeliness for July (NYPSC Exhibit 4).

11. AT&T has suggested that the Staff-adjusted on-time performance of 90.79% for July is misleading because it does not reflect the likelihood that BA-NY made errors reporting its performance for other carriers in July as well. (AT&T Comments, p. 39) As discussed above, I compared BA-NY's data against its reported metrics for a sample of orders, and found that the data largely supported BA-NY's metric scoring. The corrections I made to BA-NY's scoring were based on additional information provided by AT&T. Although AT&T cites a number of other carriers who, it alleges, have complained about their hot cut provisioning experiences with BA-NY, the data cited by AT&T are not in fact for hot cuts, but rather for new loop installations. (AT&T Meek Aff., p. 85, note 67) AT&T was the only carrier to submit information on an order-specific basis for hot cuts. While there were almost certainly errors in the non-AT&T data, it is impossible to correct them without input from the carriers involved. I did not believe it was appropriate to assume that the results for other carriers would be identical to AT&T's, as I do not believe other carriers conduct their hot cut provisioning as AT&T does. For example, BA-NY witness Thomas Maguire noted that AT&T submitted a "startling number of order versions" to BA-NY, and that this churn confuses the process and puts end users' service at risk of premature disconnect. (BA-NY Maguire Aff. (August 27, 1999) ¶11, BA-NY Application, Appdx. C, Vol. 62, Tab 977) If AT&T in fact submitted more supplements to its orders than other carriers did, it is likely that AT&T would have experienced a higher number of delayed or incorrectly provisioned hot cuts. I also do not feel it appropriate to assume that all of BA-NY's metric scoring errors have the effect of overstating BA-NY's performance. I identified a number of instances in both July and August where BA-NY scored as misses orders that AT&T believed were completed on time. As I stated, reflecting the additional misses I discovered would bring

BA-NY's overall performance for July down to 90.79% on -time hot cuts. Any errors in data for carriers other than AT&T would obviously change the final result, but would not necessarily cause the on-time percentage to decrease.

Outages

12. I also examined claims related to customer outages resulting from the hot cut process. AT&T claims that from June 21 through August 31, 1999, BA-NY put one out of every 10 new AT&T customers out of service. Overall, AT&T asserts, 170 new AT&T business customers were adversely affected by BA's provisioning failures. (AT&T Comments, p. 32, citing AT&T Meek Aff, ¶¶ 83-86.). AT&T has interpreted its data to show that, for August, 76 of 674 customers went "out of service as a result of BA-NY provisioning errors", and that 61% of these customers (105) lost service for 3 days or more. (Id. ¶87.)

13. I reviewed all of the documentation provided by AT&T for those orders in which AT&T claims there was a customer outage, including trouble tickets and hot cut logs. I analyzed 167 orders, approximately 10 orders for June, 81 orders for July, and 76 orders for August. I determined that, for June and July combined, 39 orders submitted by AT&T were clearly not outages that resulted from a failure of BA-NY to follow the provisioning process. For August, 36 were clearly not outages that resulted from a failure of BA-NY to follow the provisioning process. In most cases, these were hot cuts that were accepted as successful by AT&T. There were troubles reported on these lines after the hot cut. My experience is that there are a number of reasons for these troubles, most of which may have nothing to do with the quality of the hot cut, but reflect the types of normal troubles experienced by BA-NY's own retail customers. For another 12 orders in June and July, and 14 orders in August, it was not clear from AT&T's logs what the trouble was, and therefore I was unable to determine whether BA-NY was at fault, or whether the trouble was related to the hot cut. Therefore, for August, BA-NY is responsible for failures during the hot cut provisioning process for between 4 and 6% of AT&T's orders.

NYPSC Exhibit 5 contains a summary of my review of the orders submitted by AT&T from June 21, 1999 to August 31, 1999, for which AT&T claimed a customer outage. NYPSC Exhibit 6 is a subset of those orders, containing only those orders for which AT&T submitted documentation to the FCC.

14. I also studied the duration of outages as provided in AT&T's logs. For the vast majority of the customers whose outages could be attributed to a BA-NY failure during the hot cut provisioning process, the outages were measured in hours, not days or weeks as AT&T alleges. As shown on Exhibit 6, in many cases AT&T took longer to identify and report the problem to BA-NY than BA-NY took to fix the problem .

15. My review of AT&T's trouble logs indicates that AT&T generally does not perform any mechanized line test when it accepts a hot cut. AT&T attempts to call its customer, and if it cannot reach its customer it waits until the customer calls AT&T. Staff accompanied KPMG to other CLEC operations centers, and observed other carriers performing mechanized tests. This difference in testing method may explain some of the extended outage durations experienced by AT&T's customers.

16. Finally, AT&T states that Staff's analysis confirmed that, for the period June 21 to July 16, all but 5 of the 54 outages reported by AT&T were due to BA-NY provisioning errors (AT&T brief pp 39-40). My analysis contained no such conclusion. Further, to my knowledge, no one at the NYDPS provided such confirmation.

Dated this 5th day of November, 1999

This concludes the Affidavit of Margaret D. Rubino on behalf of the New York State Public Service Commission.

On this 5th day of November, 1999, I hereby swear under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.
